macroeconomics is the first text to truly reflect today's macroeconomy in this teachable coherent book the author makes complex topics easily understandable for undergraduates and combines innovative treatment of both the short run and the long run with a strong emphasis on problem solving

teaches students how macroeconomics is studied and applied in the 21st century

a stellar cast of economists examines the roles of creative destruction in addressing today's most important political and social questions: inequality is rising, growth is stagnant, while rents accumulate, the environment is suffering, and the COVID-19 pandemic exposed every crack in the systems of global capitalism. How can we restart growth? Can our societies be made fairer? Editors Ufuk Akcigit and John Van Reenen assemble a world-leading group of social scientists and theorists to consider these questions, and in particular, how ideas about the economics of creative destruction may help solve the problems we face most closely associated with Joseph Schumpeter, formalized by Philippe Aghion and Peter Howitt in the 1990s. The idea of innovation as creative destruction has become foundational in economics, reaching into almost every corner of the discipline, both theoretically and empirically. Now, at a time of rapid and disorienting change, is an opportune moment to pull the disparate strands of research together to assess what has been learned and continue an intellectual project that can aid economic decision making in the decades to come. The cutting-edge work in the economics of creative destruction focuses on innovation and growth. Contributors offer illuminating insights into monopoly and inequality, the nature of the social safety net, climate change, and the ups and downs of regulation. Collectively, they suggest that governance has a role to play in capitalism, maximizing its benefits and minimizing its risks.

Now updated to include new chapters dedicated to the global economic crisis, the most exciting new text in a generation, Chad Jones's *Macroeconomics* will change the way intermediate macroeconomics courses are taught. It is the first and only undergraduate text to present the Romer model of endogenous technological change, which is integral to the way economists study growth theory today. Other texts stop at the Solow model, an approach first formulated in the 1950s. Jones presents the Romer model at an appropriate level for undergraduates. The text is written in an engaging, conversational style that makes students feel as though they are sitting in on one of Professor Jones's lectures. When introducing new material, he presents it in a careful, patient manner and follows the discussion with case studies and worked examples. Each chapter includes two complete worked examples that walk students step by step through the material covered in that chapter. In addition, this is the first text in the intermediate macroeconomics market to be fully integrated with an online homework management system. The easy-to-use SmartWork homework management system offers extensive answer feedback as students work through a problem. [Click here to find out more.](#)

Vols 2, 4, 11, 62, 68 include the Society's membership list. Vols 55, 80 include the journal of applied mechanics, also issued separately as contributions from the Society's applied mechanics division.

Introduction to Economic Growth is the only text to synthesize the journal literature in a way that makes this important field accessible to undergraduates. Charles I. Jones and new co-author Dietrich Vollrath have updated and revised the text to reflect recent advances in economic growth theory in clear, direct language.
